

Keeping your home dry

Keeping moisture away is key to preventing condensation and stopping mould growth.

Here's how to do it:

- Air it out:** Let fresh air in through windows, doors, and vents.
- Fix leaks:** Report leaks promptly to prevent wetness and mould.
- Use lids:** Cover pots when cooking to keep moisture down.
- Dry clothes well:** Use good airflow or a dehumidifier if drying clothes.
- Wipe down:** Dry surfaces after showering or cooking to prevent dampness.
- Use extractor fans:** Turn on fans to suck out humid air in kitchens and bathrooms.
- Warm rooms:** Keep your home warm to keep it dry.
- Dehumidify:** Use a dehumidifier if your home feels too humid.
- Create space:** Let air circulate around furniture by not placing it against walls, vents or radiators.
- Keep clean:** Regular cleaning helps prevent mould growth.
